

Artisan E-Commerce App (Functionality is in the works)

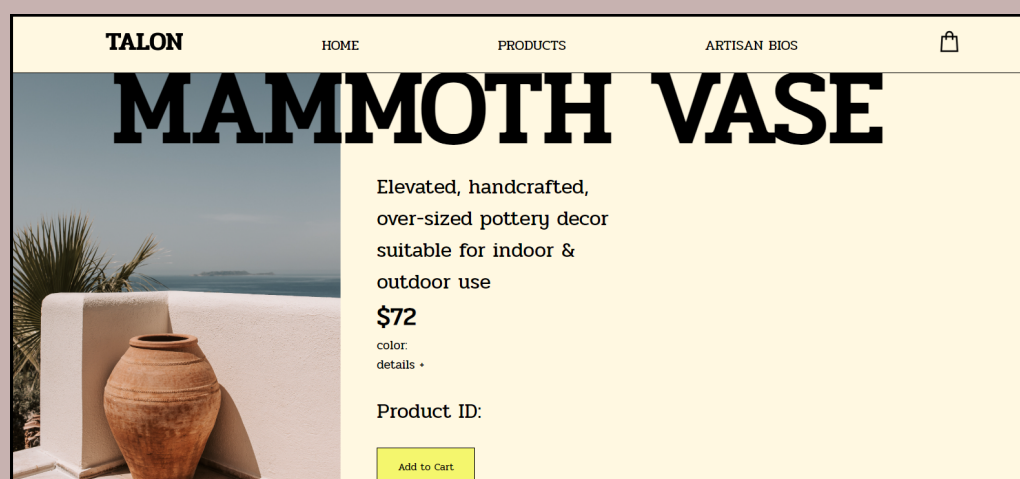

Introducing Talon. This is the UI of a store made using MERN (MongoDB, Express.js, React.js, Node.js). I built an API for it that holds details about each product, along with product images. It's all stored in MongoDB. As I complete this app, it will have CRUD functionality for adding, updating and removing items from the cart. Stay tuned . . .

Here's a shot of the top of the homepage and as you scroll, the oversized logo appears normally in the top left corner.

A little more of what you'll see as you scroll . . .

This is a shot of the product page template, which repeats the style of the fun, oversized text which displays the product name.

See it in the midst of development here: <https://modern-e-commerce-store-front-end-1-1.onrender.com/>
